Prevention through Design Design for Construction Safety

[Home](#) | [Concept](#) | [Process](#) | [History & Future](#) | [Challenges](#) | [Resources](#) | [Links](#) | [Contacts](#)

News and Updates:

PtD has been added to the [LEED rating](#) system!

Here's a new [online course](#) on PtD offered by East Carolina University that allows participants to earn CEUs.

The American Society of Civil Engineers are sponsoring a [student essay contest](#) on PtD!

Consider attending a [CIB W099 conference on PtD](#): International Health and Safety Conference: Benefitting Workers and Society through Inherently Safe(r) Construction 10th - 11th September 2015, Jordanstown Campus, Northern Ireland

PtD will be one of the [presentations](#) at the [NY/NJ Educ. Research Center Scientific Meeting](#) at Mt. Sinai Hospital in NYY on March 20.

PtD will be one of the presentations at the Safety Executives of New York [Professional Development Conference](#) on March 24.

An ANSI A10 Prevention through Design Workgroup has been formed, with the goal of producing a PtD in Construction Technical Report. The workgroup is being chaired by Mike McCullion at SMACNA.

Several reports and presentation files have been added to the [Resources](#) tab (July 7, 2014).

NIOSH Rolls-out New [Web Resources](#) to Support Buy Quiet Programs

NIOSH released a [report](#) on the State of the National (NIOSH) Initiative on Prevention through Design

COURSE DESCRIPTION

The presentation will summarize the PtD concept and the ethical and sustainability-related reasons for PtD, provide common examples, and summarize tools and processes that enable PtD. The presentation will conclude with suggestions for how to move forward with implementing PtD in your organization.

LEARNING OBJECTIVES

Participants will be able to:

- ❑ Define Prevention through Design (PtD)
- ❑ Identify common examples of PtD
- ❑ Describe tools and processes that enable PtD
- ❑ Summarize steps in implementing PtD in an organization.

OVERVIEW

- ❑ PtD Concept
- ❑ Motivation
- ❑ Examples
- ❑ Leaders
- ❑ Tools and Processes
- ❑ Moving forward in your organization

Prevention through Design

= Design for Safety

= Safety by Design

IMPORTANT MANAGEMENT CONCEPTS UNDERLYING PTD

- ❑ Sustainability
- ❑ Collaboration
- ❑ Innovation and Managing Change

PREVENTION THROUGH DESIGN (PTD)

“Addressing occupational safety and health needs in the design process to prevent or minimize the work-related hazards and risks associated with the construction, manufacture, use, maintenance, and disposal of facilities, materials, and equipment.”

(<http://www.cdc.gov/niosh/topics/ptd/>)

PTD IN CONSTRUCTION IS...

- ❑ Explicitly considering construction safety in the design of a project.
- ❑ Being conscious of and valuing the safety of construction workers when performing design tasks.
- ❑ Making design decisions based in part on a design element's inherent safety risk to construction workers.

“Safety Constructability”

WHY PTD? ANNUAL CONSTRUCTION ACCIDENTS IN U.S.

- ❑ Nearly 200,000 serious injuries
- ❑ Nearly 1,000 deaths

WHY PTD? DESIGN-SAFETY LINKS

- ❑ **22%** of 226 injuries that occurred from 2000-2002 in Oregon, WA, and CA¹
- ❑ **42%** of 224 fatalities in US between 1990-2003¹
- ❑ **60%** of fatal accidents resulted in part from decisions made before site work began²
- ❑ **63%** of all fatalities and injuries could be attributed to design decisions or lack of planning³

¹ Behm, M., "Linking Construction Fatalities to the Design for Construction Safety Concept" (2005)

² European Foundation for the Improvement of Living and Working Conditions

³ NSW WorkCover, *CHAIR Safety in Design Tool*, 2001

WHY PTD? PROFESSIONAL ETHICS

- ❑ National Society of Professional Engineers (NSPE)
Code of Ethics:
 - Engineers shall hold paramount the safety, health, and welfare of the public.

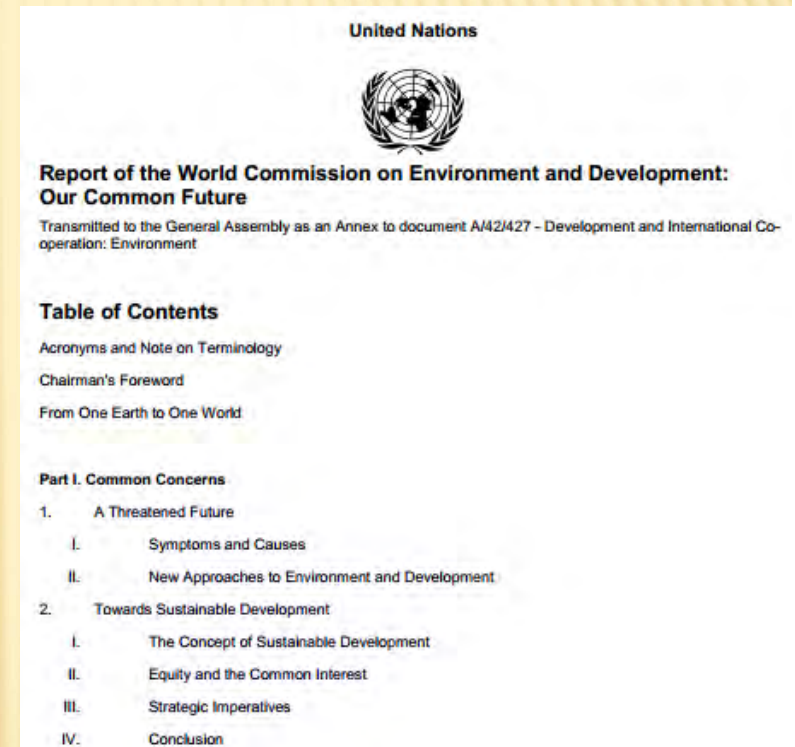

- ❑ American Society of Civil Engineers (ASCE) Code of Ethics:
 - Engineers shall recognize that the lives, safety, health and welfare of the general public are dependent upon engineering decisions

WHY PTD? SUSTAINABILITY

PTD'S TIE TO SUSTAINABILITY

- ❑ Definition of Sustainable Development in Brundtland Commission Report (1987)
- ❑ Focus on people as much as on the environment
 - Meet the needs of people who can't speak for themselves

CORPORATE SOCIAL RESPONSIBILITIES

- ❑ “Commitment by business to behave ethically and contribute to economic development;
- ❑ “Improve quality of life of the local community and society at large.”
- ❑ “Improve quality of life of the workforce and their families;

Source: World Business Council for Sustainable Development

CSR: SUPPLY CHAIN MANAGEMENT

- Supplier social equity
 - Anti-Sweatshop movement
 - Fair Trade
 - Bangladesh factory collapse

SUSTAINABILITY IS NOT JUST BEING GREEN

PTD AND SOCIAL SUSTAINABILITY/EQUITY

- ❑ Do not our duties include minimizing all risks that we have control over?
- ❑ Do we not have the same duties for construction, maintenance, line workers as for the “public”?
- ❑ Is it ethical to create designs that are not as safe as they could (practically) be?

DESIGN HAS MAJOR LEVERAGE

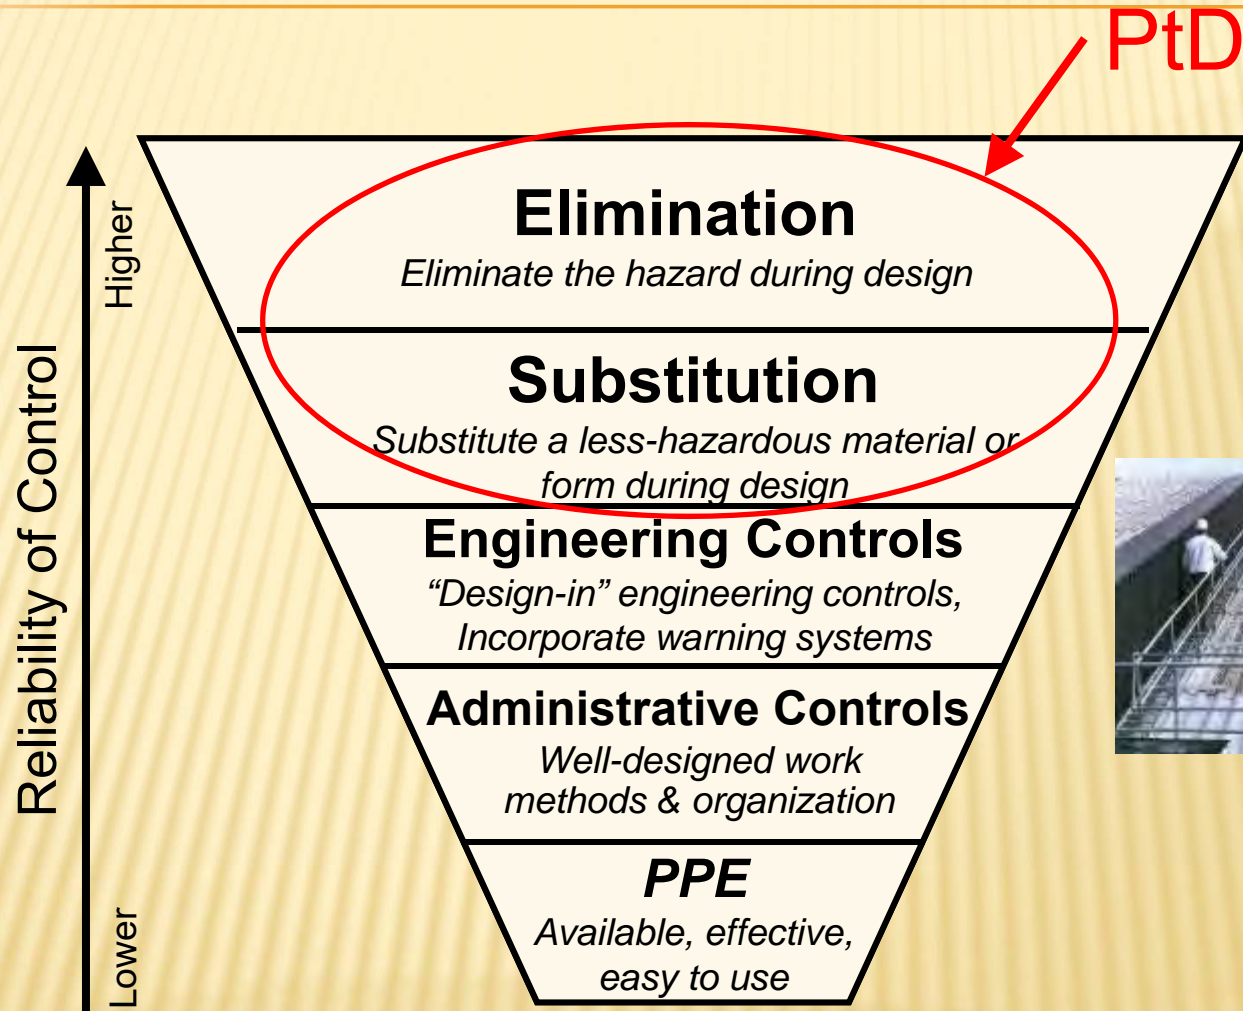

- ❑ The Right thing to do and...
- ❑ The Smart thing to do

WHY PTD? BANG FOR THE BUCK

- Ability to influence safety is greatest early in the project schedule during planning and design (Szymberski, 1997)

HIERARCHY OF CONTROLS

WHY PTD? TANGIBLE BENEFITS

- ❑ Reduced site hazards
 - **Fewer worker injuries and fatalities**
- ❑ Reduced workers' compensation premiums
- ❑ Increased productivity and quality
- ❑ Fewer delays due to accidents
- ❑ Encourages designer-constructor collaboration
- ❑ Improved operations/maint. safety

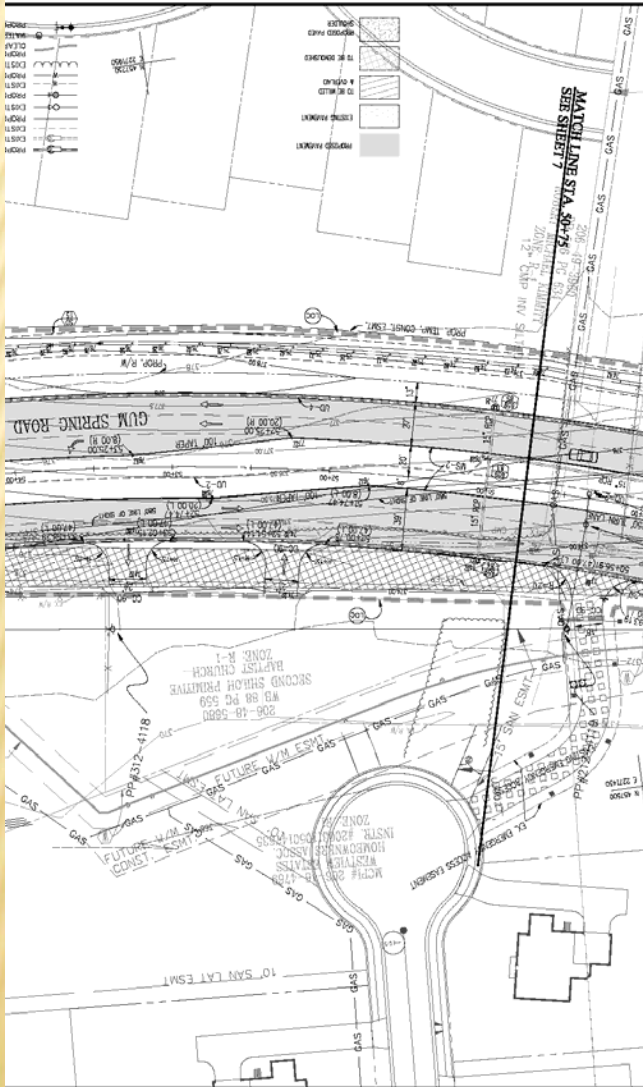

OVERVIEW

- ❑ PtD Concept
- ❑ Motivation
- ❑ **Examples**
- ❑ Leaders
- ❑ Tools and Processes
- ❑ Moving forward in your organization

EXAMPLE OF THE NEED FOR PTD

- ❑ Design spec:
 - Dig groundwater monitoring wells at various locations.
 - Wells located directly under overhead power lines.
- ❑ Accident:
 - Worker electrocuted when his drill rig got too close to overhead power lines.
- ❑ Engineer could have:
 - specified wells be dug away from power lines; and/or
 - better informed the contractor of hazard posed by wells' proximity to powerlines through the plans, specifications, and bid documents.

PTD DESIGN REVIEW

❑ Hazard identification

- What construction safety hazards does the design create?

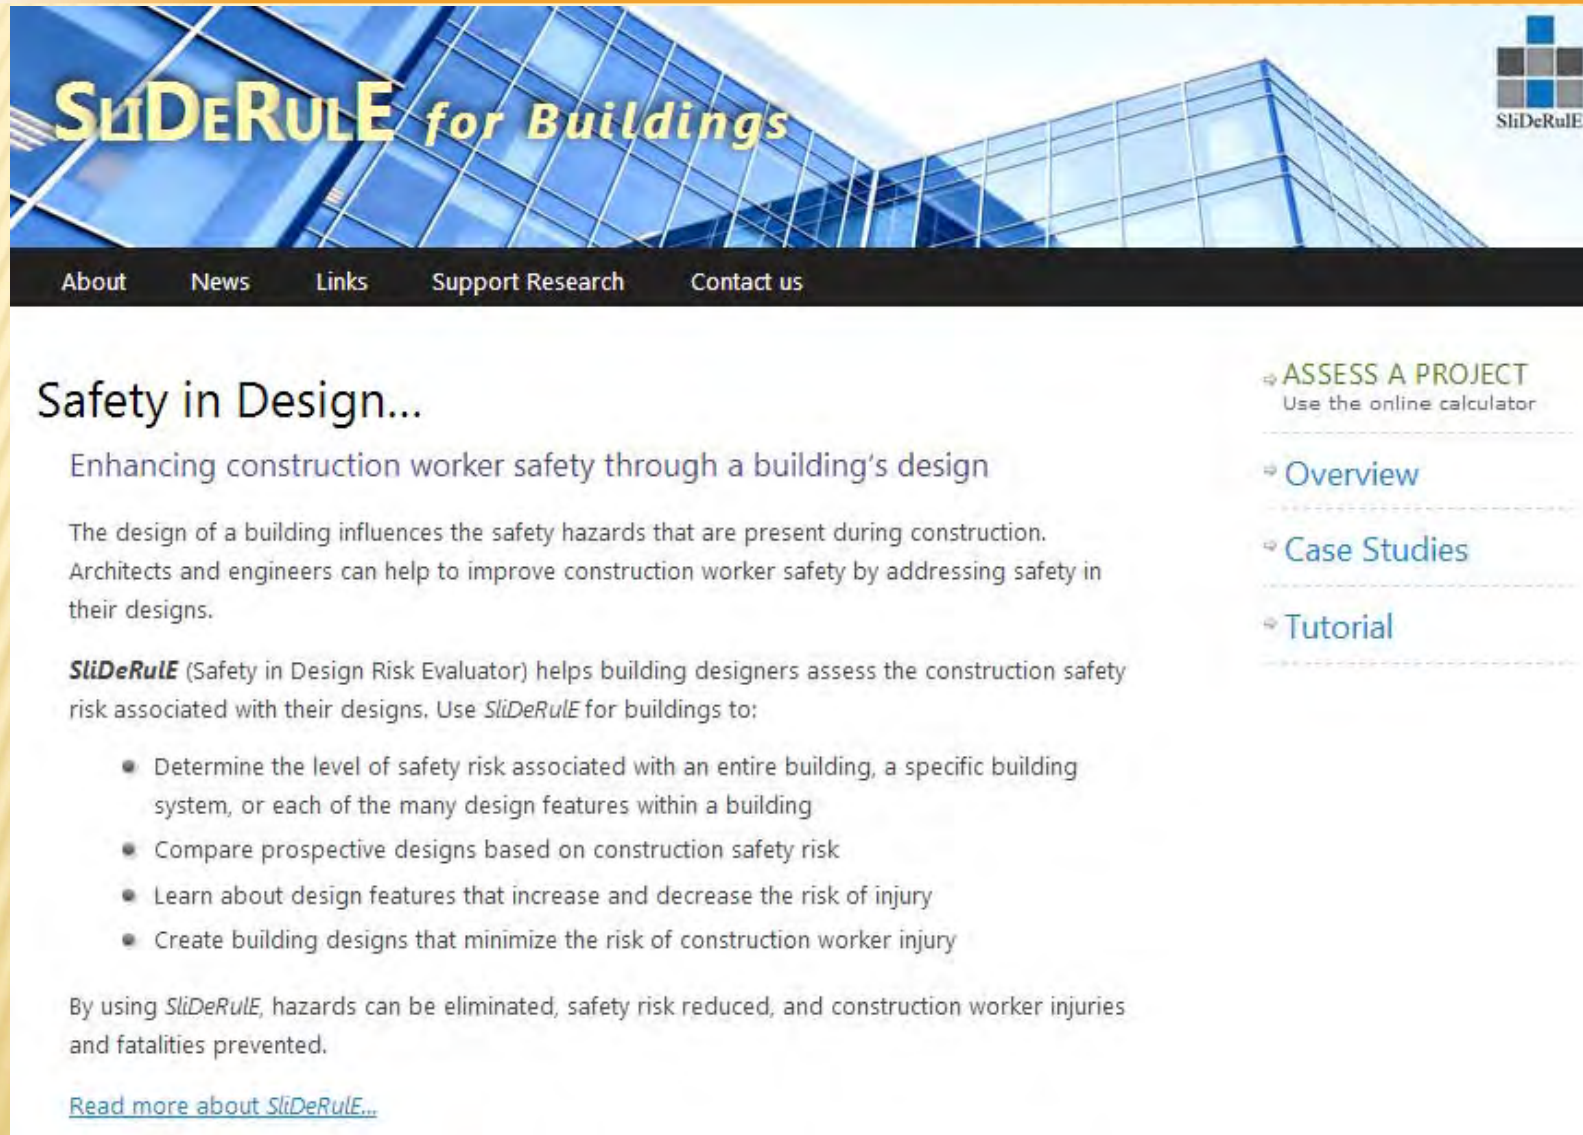

❑ Risk assessment

- What is the level of safety and health risk associated with each hazard?

❑ Design option identification and selection

- What can be done to eliminate or reduce the risk?
- Remember the hierarchy of controls.....

PTD TOOL – DESIGN RISK ASSESSMENT

The screenshot shows the homepage of the SliDeRule for Buildings website. The header features a blue glass building facade with the text "SliDeRule for Buildings" in yellow and white. A navigation bar includes links for "About", "News", "Links", "Support Research", and "Contact us". The main content area is titled "Safety in Design..." and describes the tool's purpose in enhancing construction worker safety through building design. It lists four key functions: determining safety risk levels, comparing prospective designs, learning about design features that affect risk, and creating designs that minimize risk. A sidebar on the right offers links to "ASSESS A PROJECT", "Overview", "Case Studies", and "Tutorial". The footer includes a link to "Read more about SliDeRule..." and the website URL.

SliDeRule for Buildings

About News Links Support Research Contact us

Safety in Design...

Enhancing construction worker safety through a building's design

The design of a building influences the safety hazards that are present during construction. Architects and engineers can help to improve construction worker safety by addressing safety in their designs.

SliDeRule (Safety in Design Risk Evaluator) helps building designers assess the construction safety risk associated with their designs. Use *SliDeRule* for buildings to:

- Determine the level of safety risk associated with an entire building, a specific building system, or each of the many design features within a building
- Compare prospective designs based on construction safety risk
- Learn about design features that increase and decrease the risk of injury
- Create building designs that minimize the risk of construction worker injury

By using *SliDeRule*, hazards can be eliminated, safety risk reduced, and construction worker injuries and fatalities prevented.

Designing to make management of hazards associated with working on roofs easier

INTRODUCTION

1. Designers can play a major part in making it easier to manage the hazards associated with roof working.
2. Roofs are hazardous places to work, because they are at height and have coverings, which are lightweight and often fragile and deteriorate over time through being exposed to the elements.
3. While work on roofs is an infrequent activity, the opportunity for a fatal or serious accident is very high. And, designers who see roofs only as a means making the building watertight, exacerbate the situation. They forget that people have to construct roofs and maintain them. Consequently, little provision is made for this.
4. People are often killed or injured when falling from roofs. Therefore, designers need to consider alternative designs to ensure roof work can be eliminated or significantly reduced where reasonably practicable.
5. This guidance note makes designers aware of the issues and gives information on how they can help to make roof work safer through their designs.

HAZARDS ASSOCIATED WITH WORK ON ROOFS

6. Workers on roofs are exposed to the hazard of falling from height. This can either be off an unguarded edge or through a fragile surface.
7. Manual handling and premature collapse hazards also exist.

WHAT DESIGNERS SHOULD DO

8. Designers should consider two phases: the construction phase and the maintenance phase

The construction phase

9. During this phase, it is inevitable that people will need to be on the roof and designers should consider providing for systems that will help a contractor to manage the hazard of falling from height.

OVERVIEW

- ❑ PtD Concept
- ❑ Motivation
- ❑ Examples
- ❑ Leaders
- ❑ Tools and Processes
- ❑ **Moving forward in your organization**

THREE STEPS TOWARDS PTD

1. Establish a lifecycle safety culture
2. Establish enabling processes
3. Team with organizations who value lifecycle safety

Culture

Processes

Partners

ESTABLISH A LIFECYCLE SAFETY CULTURE

- ❑ Instill the right safety values
- ❑ Secure management commitment
- ❑ Training
- ❑ Confirm Life Cycle Costing criteria
- ❑ Ensure recognition that designing for safety is the smart thing to do and the right thing to do
 1. Professional Codes of Ethics
 2. Payoff data

ESTABLISH ENABLING PROCESSES

- ❑ Designer training and tools
- ❑ Qualifications-based contracting
- ❑ Negotiated or Cost-Plus contracting
- ❑ Collaborative decision processes
- ❑ IPD or enabled safety constructability input

SUTTER HEALTH'S IPD PROCESS

- ❑ Integrated Project Delivery (IPD) facilitates collaboration of design and construction professionals during design
 - Co-located
 - Processes and norms for candid feedback
 - Trust
 - Sufficient time
 - Life cycle costing criteria
 - Common success criteria

CHOOSE YOUR PARTNERS WISELY

- ❑ PtD capability in designer RFP
- ❑ Designer interaction experience in GC RFP
- ❑ Consider Design-Builders with industrial and international project experience
- ❑ Collaborative culture and experiences
- ❑ Open to change

PTD: AN OPPORTUNITY FOR YOU AND YOUR FIRM

- ❑ All organizational change starts with individual initiative
- ❑ Will you be a leader or a laggard?

INITIATING PTD IN YOUR ORGANIZATION

- ❑ Leadership
- ❑ Sustainability
- ❑ Ethics
- ❑ Innovation
- ❑ Change management

SUMMARY

- ❑ PtD is tied with sustainability, CSR, ethics
- ❑ Successful organizations have implemented PtD
- ❑ Keys to implementing PtD
 - Life cycle cost perspective and budgeting
 - Systems thinking
 - Contracts facilitate collaboration
- ❑ Three first steps to implementing PtD
 - Culture, Processes, Partners
- ❑ You can be a leader in implementing PtD in your organization

THANK YOU FOR YOUR TIME!

Mike Toole
